Table S1. The reciprocal effects of anxiety and smartphone overdependence: univariate logistic regression

Dependent variable Independent variable	Category	OR (95% CI)	*p*
Anxiety			
Smartphone overdependence (normal)	Normal	1	
	Potential risk	2.34 (2.20–2.49)	< 0.001
	High risk	6.75 (6.00–7.58)	< 0.001
Percent concordant = 38.3%; Somers' D = 0.243; F = 821.56; $p < 0.001$			
Smartphone overdependence			
General anxiety disorder (minimal)	Normal		
	Mild	2.96 (2.59–3.39)	< 0.001
	Moderate	5.06 (4.29–5.96)	< 0.001
	Severe	13.42 (11.40–15.81)	< 0.001
Percent concordant = 56.7%; Somers' D = 0.421; F = 433.47; $p < 0.001$			

OR, odds ratio; CI, confidence interval.
